Heat pipes are recognised as one of the most efficient passive heat transfer technologies available. A heat pipe is a structure with very high thermal conductivity that enables the transportation of heat whilst maintaining almost uniform temperature along its heated and cooled sections.

Computational fluid dynamics (CFD) is a branch of fluid mechanics that uses numerical analysis and data structures to analyze and solve problems that involve fluid flows. Computers are used to perform the calculations required to simulate the free-stream flow of the fluid, and the interaction of the fluid (liquids and gases) with surfaces defined by boundary conditions.

Increasing scrutiny on the environmental impact of heavy-duty trucks and the desire for more fuel-efficient fleets has caused the manufacturers of class-7 and -8 trucks to investigate methods to reduce vehicle weight. This article focuses on another method to provide lightweight components, namely innovative heat-treatment schemes. It was established that the weight of heavy-duty vehicles ...
