In computer science, real-time computing (RTC), or reactive computing describes hardware and software systems subject to a "real-time constraint", for example from event to system response. Real-time programs must guarantee response within specified time constraints, often referred to as "deadlines". The correctness of these types of systems depends on their temporal aspects as well as their ...

### **Introduction to Computing**

Research: My research interests are in computer graphics, computer vision, parallel computing and human computer interaction. I have conducted a wide range of research on shape modeling/editing, texture mapping/synthesis, real-time rendering, GPU parallel computing, real-time face tracking, and 3D printing.

Computing is any activity that uses computers. It includes developing hardware and software, and using computers to manage and process information, communicate and entertain. Computing is a critically important, integral component of modern industrial technology. Major computing disciplines include computer engineering, software engineering, computer science, information systems, and information ...
