Visual perception is the ability to interpret the surrounding environment using light in the visible spectrum reflected by the objects in the environment. This is different from visual acuity which refers to how clearly a person sees (for example "20/20 vision"). A person can have problem with visual perceptual processing even if he/she has 20/20 vision.

A sense is a physiological capacity of organisms that provides data for perception. The senses and their operation, classification, and theory are overlapping topics studied by a variety of fields, most notably neuroscience, cognitive psychology (or cognitive science), and philosophy of perception. The nervous system has a specific sensory nervous system, and a sense organ, or sensor, dedicated ...

The relationship between eyes and the brain starts in your first days of fetal life. Your eyes start to develop just two weeks after conception, with the retina and the optic nerve developing as a direct outgrowth of your brain. So the retina is actually a piece of the brain that has grown into the eye, and also share a similar structure (1, 2). On top of that, sight is so important that almost ...
