The Scientist and Engineer's Guide to Digital Signal

In digital signal processing, downsampling and decimation are terms associated with the process of resampling in a multi-rate digital signal processing system. Both terms are used by various authors to describe the entire process, which includes lowpass filtering, or just the part of the process that does not include filtering. When downsampling (decimation) is performed on a sequence of ...

Chapter 6: Convolution. Convolution is a mathematical way of combining two signals to form a third signal. It is the single most important technique in Digital Signal Processing.

In signal processing and related disciplines, aliasing is an effect that causes different signals to become indistinguishable (or aliases of one another) when sampled. It also refers to the distortion or artifact that results when the signal reconstructed from samples is different from the original continuous signal.. Aliasing can occur in signals sampled in time, for instance digital audio ...

Research Summary. My current research is at the intersection of communication theory, signal processing, and information theory. A primary research thrust is the advancement of MIMO (multiple-input multiple-output) communication technology including space-time coding, efficient receiver algorithms, channel quantization, synchronization, scheduling algorithms, cross-layer design for MIMO ad hoc ...

Simplex This software is intended to replace the hardware logic of repeaters. With SIMPLEX, repeaters may be quickly implemented with a few connections between the computer sound card and the audio receiver

output and microphone transmitter input. It handles simplex repeater, duplex repeater, transponder and mixed mode.
