Aerogel is a synthetic porous ultralight material derived from a gel, in which the liquid component for the gel has been replaced with a gas. The result is a solid with extremely low density and low thermal conductivity. Nicknames include frozen smoke, solid smoke, solid air, solid cloud, blue smoke owing to its translucent nature and the way light scatters in the material.

Geim and Novoselov point out in their review that graphene is the mother of all graphitic forms of carbon, since it can be used as a 2D building material for the assembly of carbon nanomaterials in other dimensions; it can produce 0D buckyballs by wrapping, 1D nanotubes by rolling or 3D graphite by stacking (). The honeycomb lattice of graphene consists of two equivalent sub-lattices, where the ...
