Keep in mind that these are simplified descriptions of sophisticated DSP algorithms; homomorphic processing is filled with subtle details. For example, the logarithm must be able to handle both negative and positive values in the input signal, since this is a characteristic of audio signals.

A hybrid algorithm that brings together the power of standard logistic regression and evolutionary modeling. The core models are created using nonlinear evolutionary techniques and, therefore, are usually much more accurate than the simple logistic regression model.

In organic chemistry, phenols, sometimes called phenolics, are a class of chemical compounds consisting of a hydroxyl group ( $\text{-OH}$ ) bonded directly to an aromatic hydrocarbon group. The simplest of the class is phenol,  $\text{C}_6\text{H}_5\text{OH}$ . Phenolic compounds are classified as simple phenols or polyphenols based on the number of phenol units in the molecule.

3. Dimension 1 SCIENTIFIC AND ENGINEERING PRACTICES. From its inception, one of the principal goals of science education has been to cultivate students' scientific habits of mind, develop their capability to engage in scientific inquiry, and teach them how to reason in a scientific context [1, 2]. There has always been a tension, however, between the emphasis that should be placed on ...

Seeing old friends in a new light: A divergent synthesis of quinine and quinidine (see structures) was designed on the basis of a symmetrical and nonstereogenic intermediate, conceptually different from the stereodefined piperidine precursors used in past syntheses. Complementary late-stage local desymmetrization reactions were developed to access the two targets.

JNN is a multidisciplinary peer-reviewed journal covering fundamental and applied research in all disciplines of science, engineering and medicine.

## Journal of Nanoscience and Nanotechnology

Abstract. In this paper, an aqueous extract of fresh leaves of *Petalium murex* was used for the synthesis of silver (Ag) nanoparticles. Different biological methods are gaining recognition for the production of silver nanoparticles (AgNPs) due to their multiple applications.

## Characterization of silver nanoparticles by green

example, there are 2 samples that have a value of 110, 8 samples that have a value of 131, 0 samples that have a value of 170, etc. We will represent the histogram by  $H_i$ , where  $i$  is an index that runs from 0 to  $M-1$ , and  $M$  is the number of possible values that each sample can take on. For instance,  $H_{50}$  is the number of samples that have a value of 50.
