Principles of Adaptive Filters and Self-learning Systems

The most common processing approach in the time or space domain is enhancement of the input signal through a method called filtering. Digital filtering generally consists of some linear transformation of a number of surrounding samples around the current sample of the input or output signal. There are various ways to characterize filters; for example:

Digital signal processing - Wikipedia

Linearity is the property of a mathematical relationship or function which means that it can be graphically represented as a straight line. Examples are the relationship of voltage and current across a resistor (R), or the mass and weight of an object. Proportionality implies linearity, but linearity does not imply proportionality.

Digital audio page. General information. Digital audio is the most commonly used method to represent sound inside a computer, many audio processing device and modern audio storage devices (like CD, MD, DVD). Digital audio technology is a method of representing audio signal using binary numbers. An analog audio signal is converted to digital by the use of an analog-to-digital (A/D) converter chip ...
